(Write Code and Snap Shot of output)

SL	Questions
1.	What is 1D Array? Take user input 11-19 and keep in 1D array and print the data using while loop.
2.	What is 2D Array? Take user input 19-29 and keep in 2D array and print the data using for loop.
3.	What is List? Take user input 15-25 and keep in List and print the data using foreach loop. Then remove the last 2 items of the list.
4.	What is Dictionary? Take user input (10 Fruits names) and keep in Dictionary and print the data using foreach loop. Then remove the last 3 items of the Dictionary. Then print again.
5.	What is Stack? Take user input (10 Animal names) and keep in Stack and print the data using foreach loop. Then remove the last 3 items of the Stack. Then print again.
6.	What is Queue? Take user input (10 Vegetable names) and keep in Queue and print the data using foreach loop. Then remove the last 6 items of the Stack. Then print again.
7.	What is LinkedList? We didn't discuss about it in our sessions. You have to self-learn (https://dotnetcademy.net/Learn/2047/Pages/25) Task: Take user input (12 Month names) and keep in LinkedList and print the data using foreach loop. Then remove the last 6 items of the LinkedList. Then print again.
